

**NESHAP, Subpart DDDDD – Existing Major Sources  
Permit Template Instructions**

The Michigan Department of Environment, Great Lakes, and Energy (EGLE), Air Quality Division (AQD) National Emission Standard for Hazardous Air Pollutant Permit Templates provide a consistent, streamlined means of capturing complex applicable requirements to include in Michigan Permits to Install and Renewable Operating Permits. The permit templates include the entire universe of potential conditions that could apply to the various equipment designs within a subcategory. When using the templates, applicants are to delete conditions that do not apply to the unit or flexible group's design but not alter the language in a permit condition.

When using these templates:

- edit using track changes to aid in any discussion with permitting staff;
- delete any conditions not related to your emission unit or flexible group's design or operation; and
- where appendices are included in a permit template, review, edit, and include appendix conditions relevant to your unit or flexible group's design and operation.

Text shown in red font should be:

- replaced with source/permittee specific information;
- deleted once the instruction is no longer needed; and
- renumbered as conditions are restructured.

For questions related to the use of permit templates for [Renewable Operating Permitting](#), please call your local EGLE, AQD [local district](#) office.

For questions related to use of permit templates for [New Source Review Permits to Install](#), please contact the [AQD Permit Section staff](#) at 517-284-6793.
